Experience

Project Lead

Jan ' 24 - Present

Journey - VMI Studio, London, United Kingdom

- Designed and developed multiple React-based marketing suite applications for high-profile real estate clients, featuring photorealistic 3D exploration with Gaussian Splats — enabling buyers to spatially explore properties and interact with developments.
- Owned UI and interaction design across projects, from early wireframes through to production — delivering cohesive, intuitive experiences across web, iOS, and spatial platforms.
- Built a custom CMS platform integrated with Xcode Cloud, allowing clients to spin up new app sections, manage content, and swap components on their own — enabling over-the-air iOS app updates with no code changes required.
- Owned the iOS stack — Ideated & Built a SwiftUI WebView framework for running React apps on iPads with AirPlay Extended Display and a JavaScript bridge for real-time synchronisation, turning a single iPad into a portable marketing suite with no servers or additional hardware required.
- Championed a new network free multi-room, multi-screen immersion room solution using Apple TVs and MCPeerConnectivity, replacing the legacy PC-based setup and drastically reducing costs & improving reliability — deployed on-site for clients across the US and London.
- Designed and delivered multiple spatial experiences in AR/VR across hospitality, museums, and large-scale immersive venues.
- Led Apple Vision Pro development, delivering spatial experiences, powered by USD, Gaussian Splats, NVIDIA CloudXR and MV-HEVC (stereoscopic video).
- Presented Vision Pro experiences at Apple Battersea, London, and followed up by delivering a custom enterprise demo app to their BD team.

Product Engineer

Aug ' 21 - Dec ' 22

Cerebranium - Berlin, Germany (Remote)

- Core engineer on Promexa — an online proctored examination platform adopted by schools across Germany and India — owning the mobile experience end-to-end from design through release.
- Built and shipped the iOS app in SwiftUI and the cross-platform client in Flutter, backed by a Firebase stack I configured for auth, realtime sync, and secure assessment delivery.
- Built an on-device anti-cheat module using face-landmark detection and gaze estimation, reducing flagged-session false positives for remote proctors.
- Led UI/UX from research to production — ran field studies and usability testing in partner schools, then translated findings into wireframes, prototypes, and the final component system used across web and mobile.
- Redesigned and rebuilt the company website, establishing a visual identity that carried into the product.

Product Designer

Aug ' 20 - Aug ' 21

TED - Mumbai, India

- Designed and built React web apps for TED-hosted events — covering event sites, live audience experiences, and ticketing — used by hundreds of attendees.
- Shipped a Firebase-backed ticketing and auth system end-to-end, from checkout flow design through realtime seat management on event day.
- Led design by applying UCD/HCID practice — user research, iterative prototyping, and playtesting with organisers — carrying those decisions straight into the code I shipped.
- Built a themable React component library — typography, motion, and layout primitives — that let each event site reskin a shared codebase without forking, cutting build time for new microsites from weeks to days.

Education

Postgraduate

Sep ' 22 - Dec ' 23

MSc Human-Computer Interaction Design

City, University of London

MSc Project - Design Engineering of Generative AI Tools for Creative Writing Workflows

Undergraduate

Aug ' 18 - Dec ' 22

BE in Computer Science

Vidyalankar Institute of Technology, India

Final Project - Real-Time Full-Body Motion Capture for 3D Character Animation on iOS

CGPA - 9.12 / 10

Extras (View Portfolio for more)

Personal Projects Portfolio, *vikrantgurav.com*

A website to demonstrate some of my personal projects

Mobility Assist, a personal iOS project

Presented & Published a paper at IEEE, Brisbane, Australia

Accessibility Evaluation, *for Stemettes.org*

Delivered a WCAG accessibility report to Stemettes UK

Winner of Smart India Internal Hackathon

In competition with 10 undergraduate teams to develop TourTime - Virtual tourist guide

UX Evaluation, *for Crisis.co.uk*

Delivered a website UX evaluation report to Crisis UK

Skills

Development

React
SwiftUI
Javascript, Typescript
Next.js, Vite
HTML, CSS
Tailwind CSS
Three.js
Payload CMS
Flutter
Ionic
C, C#, C++
Java, Python
Firebase, Cloudflare
Xcode
Gaussian Splats

Design

Interaction Design
Design Thinking
UI/UX Design
UCD/HCD
Wireframing
Storyboarding
Prototyping
Information Arch.

Tools

Adobe Creative Suite
Figma, Adobe XD
Webflow, Framer
Blender
Unity, Unreal Engine
